

## Activity Statement: Durable Solution Plan

### Psychosocial Summary:

- Take a detailed history of who the client is and where he has come from.
- Who are his significant others?
- Where are they?
- What can learn about his culture?
- What can you learn about his religion?

Take your time with this conversation you can come back to it later. Just maintain your curiosity about what his life was like before he came to PNG, what parts of his life did he leave behind? Which parts can he be reunited with?

### Durable Solution Discussion:

- Explain what a durable solution is.
- Discuss what durable solutions they understand they have.
- Discuss what durable solutions we understand they have.
- Explore if there is any evidence of consensus on any of the durable solutions.
- If there is document this in the DSI.
- Explain what local integration is.
- Explore if he is interested in any elements of local integration.
- If so document in the DSI.

### Barriers and Solutions:

It is anticipated that, particularly in the early stages of this conversation, there will be a number of barriers or challenges for the client to comfortably move on to a committed DSP. Part of your role as an SRM is to identify and clearly articulate these here, and then in collaboration with the client develop solutions to those barriers. You should document that working here.

### Durable Solution Identification:

When the SRM and the client have identified a durable solution that both agree is a valid DS, and that a functional pathway has been identified to that DS, the client's status should be changed to green. The DSP should then shift to a focus on the activities required to bring then client to the DS. In the case when the DS is not settlement in PNG a further conversation will be required to LI and the activity required to support the client into that space, until such time as the DSI can be activated.
